Type: ROUTINE INSPECTION

PANAMA CITY BEACH, FL 32413

Date: Jan-15-2013

3.101 (a) (3)

FACILITIES, GENERAL.

All surfaces in a primary enclosure must be constructed of durable, nontoxic materials that facilitate cleaning, and disinfection as appropriate, sufficient to maintain water quality parameters as designated in Sec. 3.106. All surfaces must be maintained in good repair as part of a regular, ongoing maintenance program.

Some of the wood surfaces in LB's pool and dry resting area is water logged. The wood around the pool is constantly being splashed upon. This wood had started to deteriorate creating many large areas of wet & dry splintering. Some of these pieces of wood are no longer durable, and may not be structurally sound due to the amount of water that has already been absorbed. These areas cannot be adequately cleaned or disinfected either. The dried splinters can potentially cause injury to this animal.

The wood shall be repaired or replaced so that it is durable, easily cleaned and disinfected, and cannot potentially cause injury to the pinniped.

Correct by March 1, 2013

3.106 (b) (3)

WATER QUALITY.

Water samples shall be taken and tested at least weekly for coliform count and at least daily for pH and any chemical additives (e.g. chlorine and copper) that are added to the water to maintain water quality standards.

Copper is added to the water in the dolphin pools, the the sea lion show, sea lion upstairs, & sea lion exhibit pools. The licensee tests these pools for copper concentrations only every other day.

Water samples shall be taken and tested daily for any chemical additives that are added to the water.

Correct immediately
